Age: 5+

Materials: 8.5" x 11" sheets of paper

Introduction: Now that we're no longer in the classroom, this is the perfect time to practice our paper plane making skills. Here is a simple airplane you can make at home.

Activity:
After flying your first airplane, try making two more that change the size of the wings or their tips. What happens to your plane when you use a narrower wing? What happens when you use a bigger wingtip?
